

RESEARCH PROFILE

Seeking a funded Doctoral Researcher or Research Assistant position in human-computer interaction, human-AI interaction, immersive systems, mixed reality, or user research at Aalto University, with availability from August–September 2027.

Human–computer interaction researcher studying how proactive AI and AR smart glasses affect users’ metacognition, agency, perceived control, and social acceptability in everyday interaction. Research examines how sensing and inference become socially visible, how proactive systems can support users without weakening self-assessment or interpretability, and how attachment and loss emerge across long-term use and discontinuation. Designs and implements the prototypes and experimental apparatus used in her own studies, and treats agency and creative autonomy as measurable outcomes.

RESEARCH EXPERIENCE

AXIS Lab, Interaction Science Institute, Sungkyunkwan University

Sept 2026 – present

Researcher. Continuing research on AR smart glasses, proactive AI, and socially visible sensing; preparing manuscripts and doctoral research proposals.

EDUCATION

Sungkyunkwan University · Master of Science in Engineering, Immersive Media Engineering

Aug 25, 2026

Advisor: Prof. Changjun Lee · AXIS Lab

Thesis: *When Sensing Becomes Socially Visible: Wearer Meaning and Adoption Resistance in AR Smart Glasses*

Sungkyunkwan University · Bachelor of Culture and Technology Convergence; Bachelor of Economics

Feb 2025

Major in Culture and Technology Convergence; International Trade Linked Major, Economics Track. Graduated with SKKU Summa Cum Laude.

SELECTED RESEARCH AND PROJECTS

AR Smart Glasses and Socially Visible Sensing

Master’s thesis, 2026

- Examined how sensing that is visible to bystanders, not only to the wearer, shapes wearer meaning and adoption resistance in AR smart glasses.
- Third study in a programme of work conducted on AR smart glasses hardware, alongside the proactive-AI and AI-companion experiments below.

Prototype and System Development for Empirical HCI Research

Ongoing

- Designed and implemented the interactive tools, services, and experimental systems used across her own studies rather than relying on off-the-shelf platforms.
- Covers the full path from concept and implementation through experimental design to user-centred evaluation.

See, Sense, Spark — Proactive AI for Creative Research Ideation SIGGRAPH Asia 2025

- Built a proactive AI system on Xreal Air 2 Pro smart glasses that read the user’s visual surroundings and academic context to offer unprompted research directions.
- Between-subjects comparison of coarse- versus fine-grained user profiling, measuring usefulness, satisfaction, trust, epistemic agency, and interest- and deprivation-driven curiosity.
- Contrary to the hypothesis, fine-grained profiling produced significantly higher interest-driven curiosity and richer affective engagement, establishing profiling granularity as a design parameter for proactive AI.

No Time to Say Goodbye — Termination and Emotional Loss in AI Companions CHI EA 2026

- Between-subjects experiment (N = 26) with IRO, an AI companion built for high-immersion parasocial interaction on Xreal Air 2 Pro smart glasses, comparing sudden termination with advance forewarning.
- Forewarning significantly reduced the sense of loss (ANCOVA, p = .011), with the strongest effect on sadness and no negative effect on commercial outcomes.
- Argues for treating termination as a distinct phase of the UX lifecycle carrying a duty of care, drawing on anticipatory grief from bereavement psychology.

Immersive Media Adoption and Value Perception 2025 journal studies

- Empirical studies on continued use, technology readiness, perceived value, and willingness-to-pay for immersive media.
- Applied VAM/PTRI, structural equation modelling, discrete-choice conjoint analysis, willingness-to-pay estimation, and user segmentation.

Phodong: AI-Based Phygital Story Creation for Children HCI Korea 2026

- Developed a generative AI and object-recognition concept for parent–child media engagement and child-centred storytelling.

AWARDS, EXHIBITIONS, AND CREATIVE WORK

HCI Korea 2026 Creative Award · Grand Prize 2026

Phodong: object recognition and generative AI-based phygital story creation for children.

SKKU Summa Cum Laude · Sungkyunkwan University Feb 2025

Ars Electronica 2024 · Exhibited work, Linz 2024

Miracle on the Han River, with Han Youngseo.

HCI Korea 2024 Creative Award · Proceedings contribution 2024

CONFERENCE PRESENTATIONS

CHI 2026 · Poster / Extended Abstract Barcelona, Spain

No Time to Say Goodbye: Emotional Loss Responses to Sudden Termination in Immersive AI Interactions.

SIGGRAPH Asia 2025 · Poster 2025

See, Sense, Spark: Profiling Granularity in Proactive AI for Creative Research Ideation.

HCI Korea 2024 / 2026 · Creative Award presentations 2024, 2026

RESEARCH SKILLS

Technical	Python; R; Unity; Unreal Engine — used to implement the research prototypes and experimental systems listed above
Methods	Controlled experiments; between-subjects designs; survey experiments; structural equation modelling; discrete-choice conjoint analysis; willingness-to-pay estimation; clustering and segmentation; prototype-based user studies
Research areas	Human–AI interaction; user agency and metacognition; proactive and creative AI; AR smart glasses and wearable XR; AI companions; technology adoption
Design	Research prototypes and experimental systems; AR/VR concept design; generative AI experience design; service and phygital interaction design; exhibited creative work
Languages	Korean (native); Chinese (proficient — six years of residence in China); English (academic reading, writing, and research communication)
